INTRODUCTION

Synthetic E-Commerce Relational Dataset adalah sebuah dataset simulasi yang dirancang untuk menggambarkan operasional platform e-commerce modern secara real. Dataset ini memiliki data relasional yang terdiri dari lima tabel utama

- Customers
- Products
- Orders
- Orders_Items
- Products_Review

DATA CLEANING AND PREPERATION

Dikarenakan data yang terlalu banyak kami melakukan pengambilan data sebanyak 5000 Rows data.

FILTER ROWS

Terdapat beberapa 0 value pada kolom total_amount lalu kami mengatasi nya dengan cara menghapus rows yang memiliki value 0.

dikarenakan total_amount adalah kolom yang berdiri sendiri dan bukan kolom yang berisi hasil perjumlahan dari kolom di table lainnya.

WORKING WITH DATES

order_year denga nisi formula
=YEAR([@[order_date]])

order month dengan formula
=MONTH([@[order_date]])

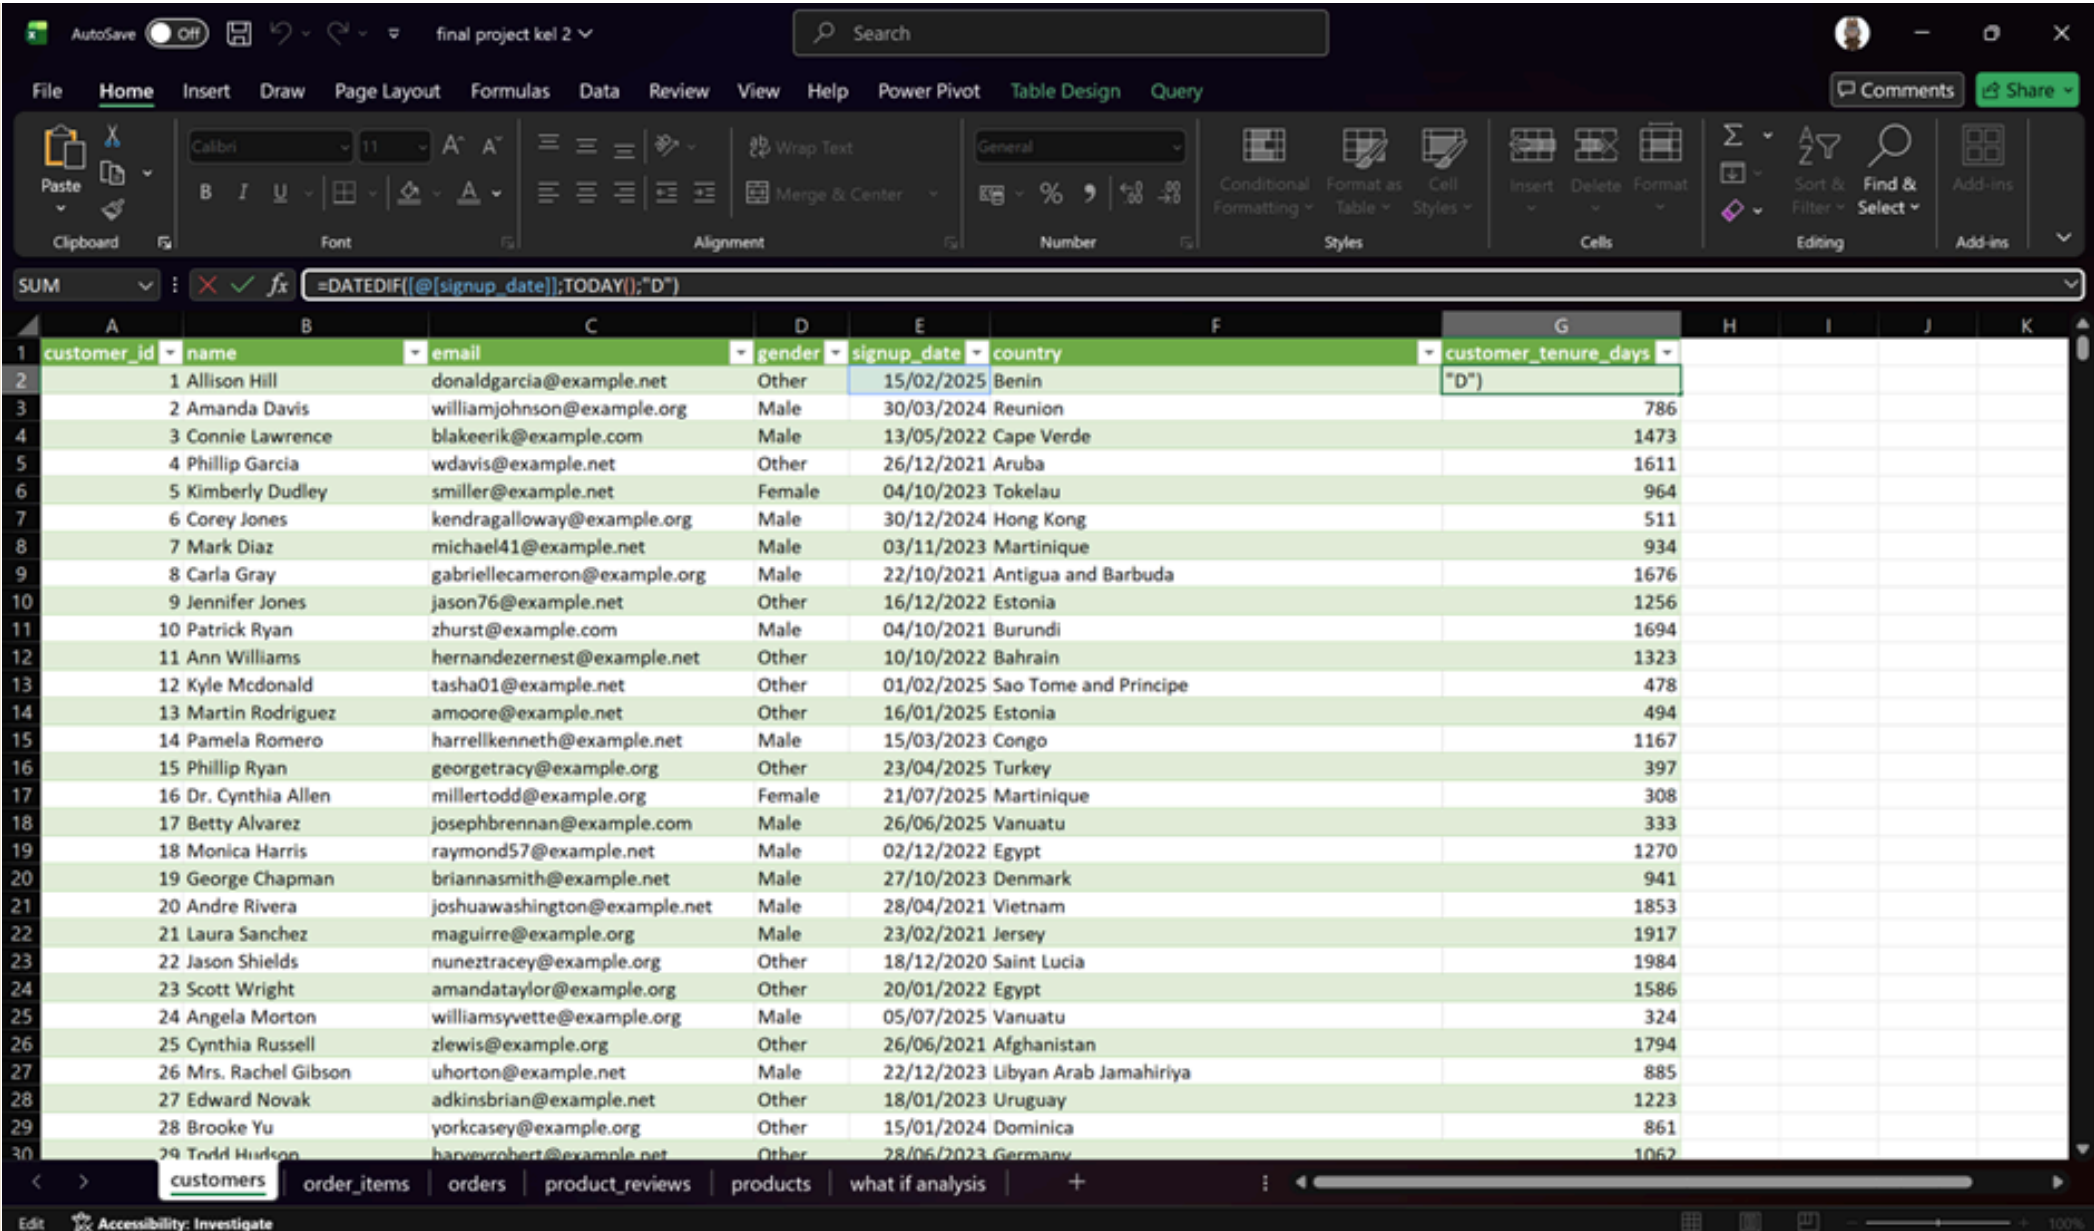

Tujuan dari pembuatan kolom ini adalah untuk memudahkan pembuatan visualisasi dengan filter month atau year agar lebih mudah dan lebih rapih

DATA CLEANING AND PREPERATION

Time Function

customer_tenure_days untuk menghitung sudah berapa hari hingga hari ini semenjak customer signup

`=DATEDIF([@[signup_date]];TODAY();"D")`

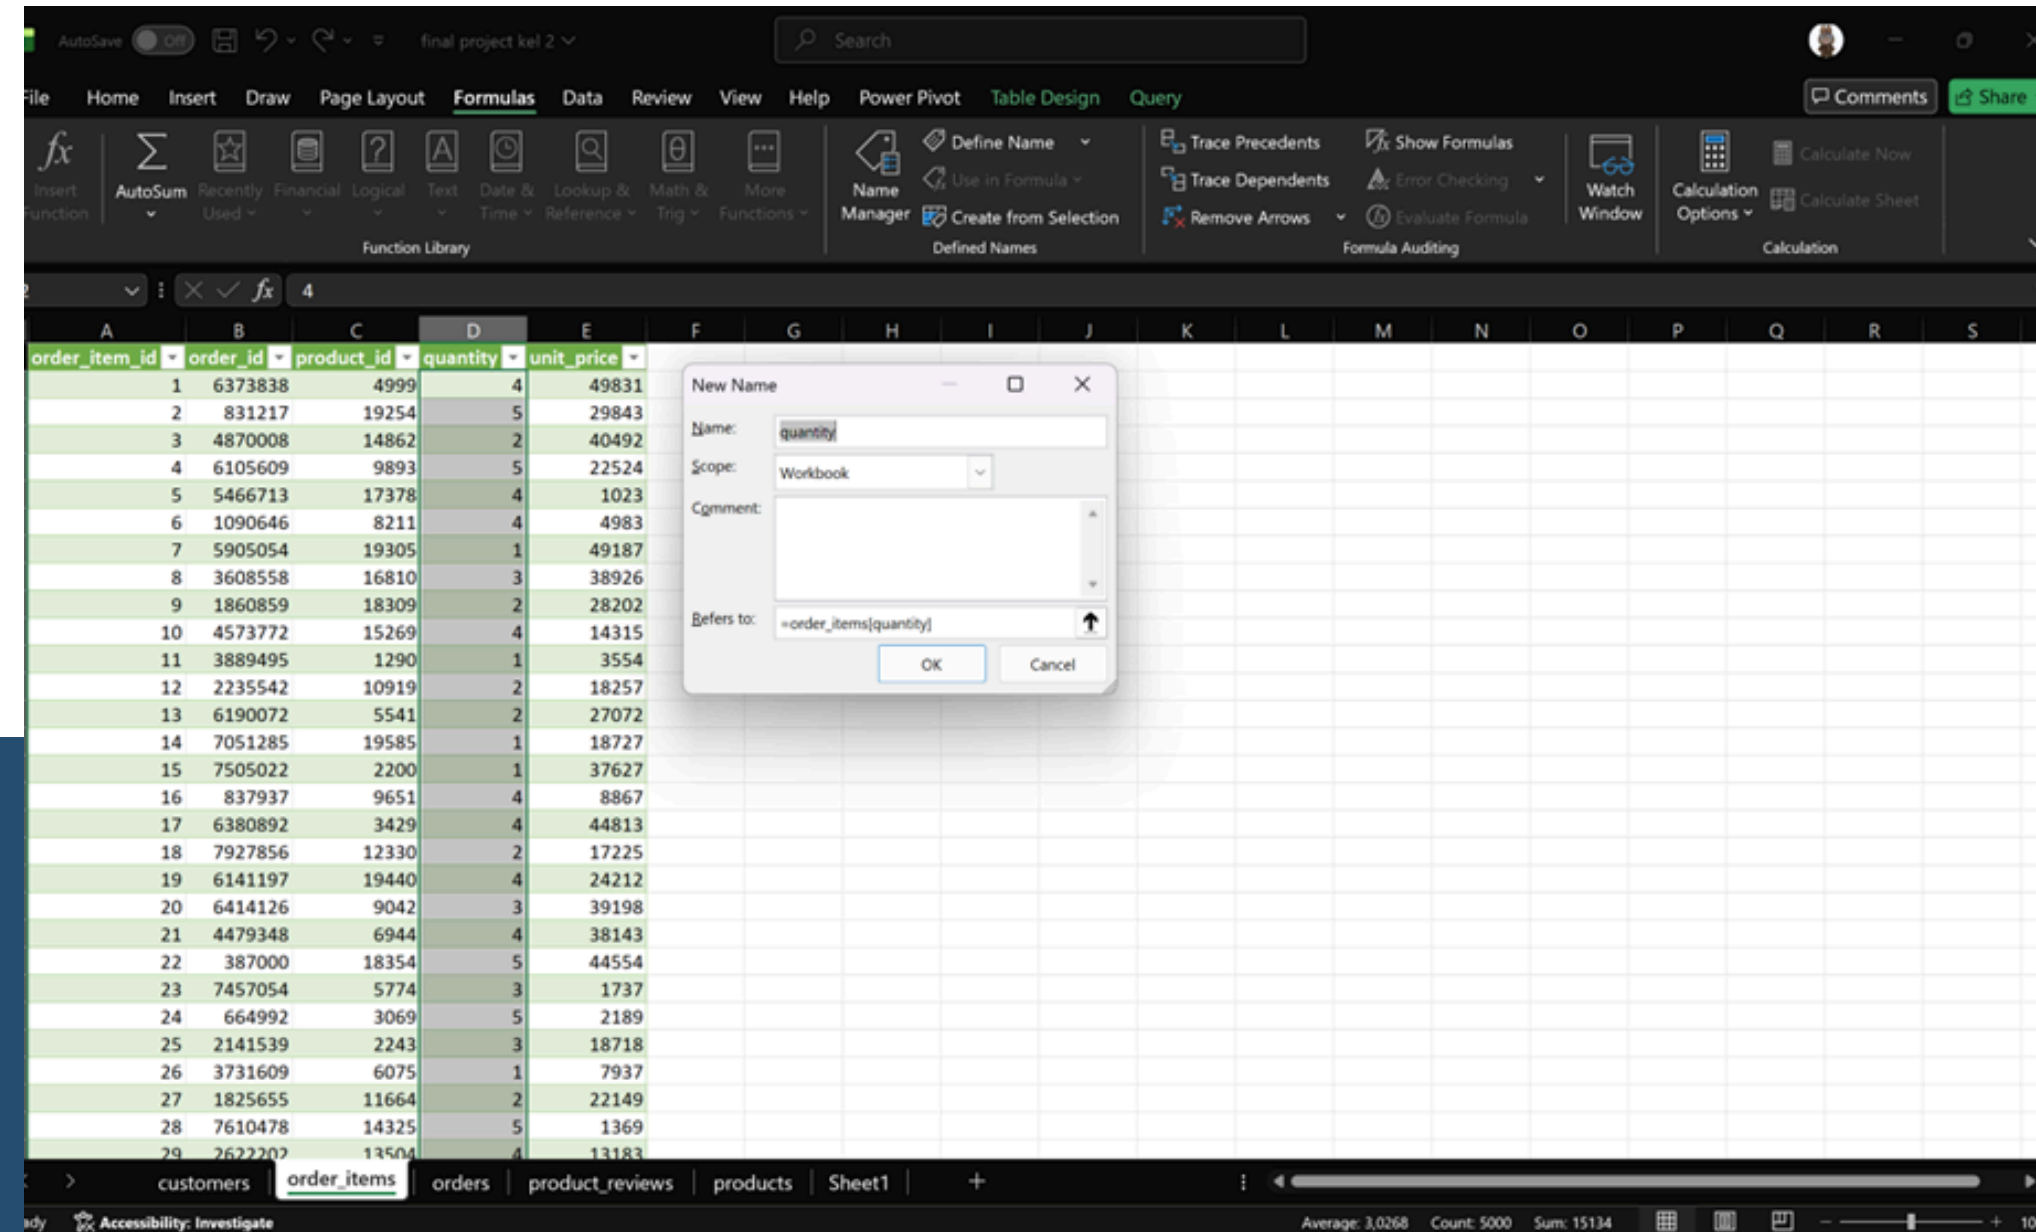

The screenshot shows an Excel spreadsheet with a table of customer data. The formula bar displays the formula `=DATEDIF([@[signup_date]];TODAY();"D")`, which is used to calculate the number of days between the signup date and the current date. The table has columns for customer_id, name, email, gender, signup_date, country, and customer_tenure_days. The data is as follows:

customer_id	name	email	gender	signup_date	country	customer_tenure_days
1	Allison Hill	donaIdgarcia@example.net	Other	15/02/2025	Benin	"D")

Named Ranged and Tables

Rumus formula ini digunakann untuk melihat secara unique total customer yang order dimana hasilnya adalah 4993 yang artinya di dalam 5000 row terdapat customer yang order lebih dari 1 kali

`=COUNTA(UNIQUE(orders[customer_id]))`

The screenshot shows the Microsoft Excel interface with the 'Formulas' tab selected. A table named 'order_items' is visible, containing columns for 'order_item_id', 'order_id', 'product_id', 'quantity', and 'unit_price'. The table has 29 rows of data. In cell G3, the formula `=SUM(order_items[unit_price])` is entered, and the result '114214981' is displayed. The bottom of the screen shows the 'customers' and 'order_items' tabs, with 'order_items' currently selected.

order_item_id	order_id	product_id	quantity	unit_price

Add Conditional Column

Add a conditional column that is computed from the other columns or values.

New column name

stock_status

Column Name Operator Value Output

If stock_quantity equals 0 Out Of Stock

Else If stock_quantity is less than 20 Critical

Else If stock_quantity is less than 100 Low Stock

Add Clause

Else Avaliable

OK Cancel

Logical Function = stock_status

Kami membuat logical function pada power query dan membuat kolom baru pada table product dengan nama stock status yaitu :

- Stock_quantity = 0 “Out of Stock”
- Stock_quantity < 20 “Critical”
- Stock_quantity < 100 “Low Stock”
- Else = “Available”

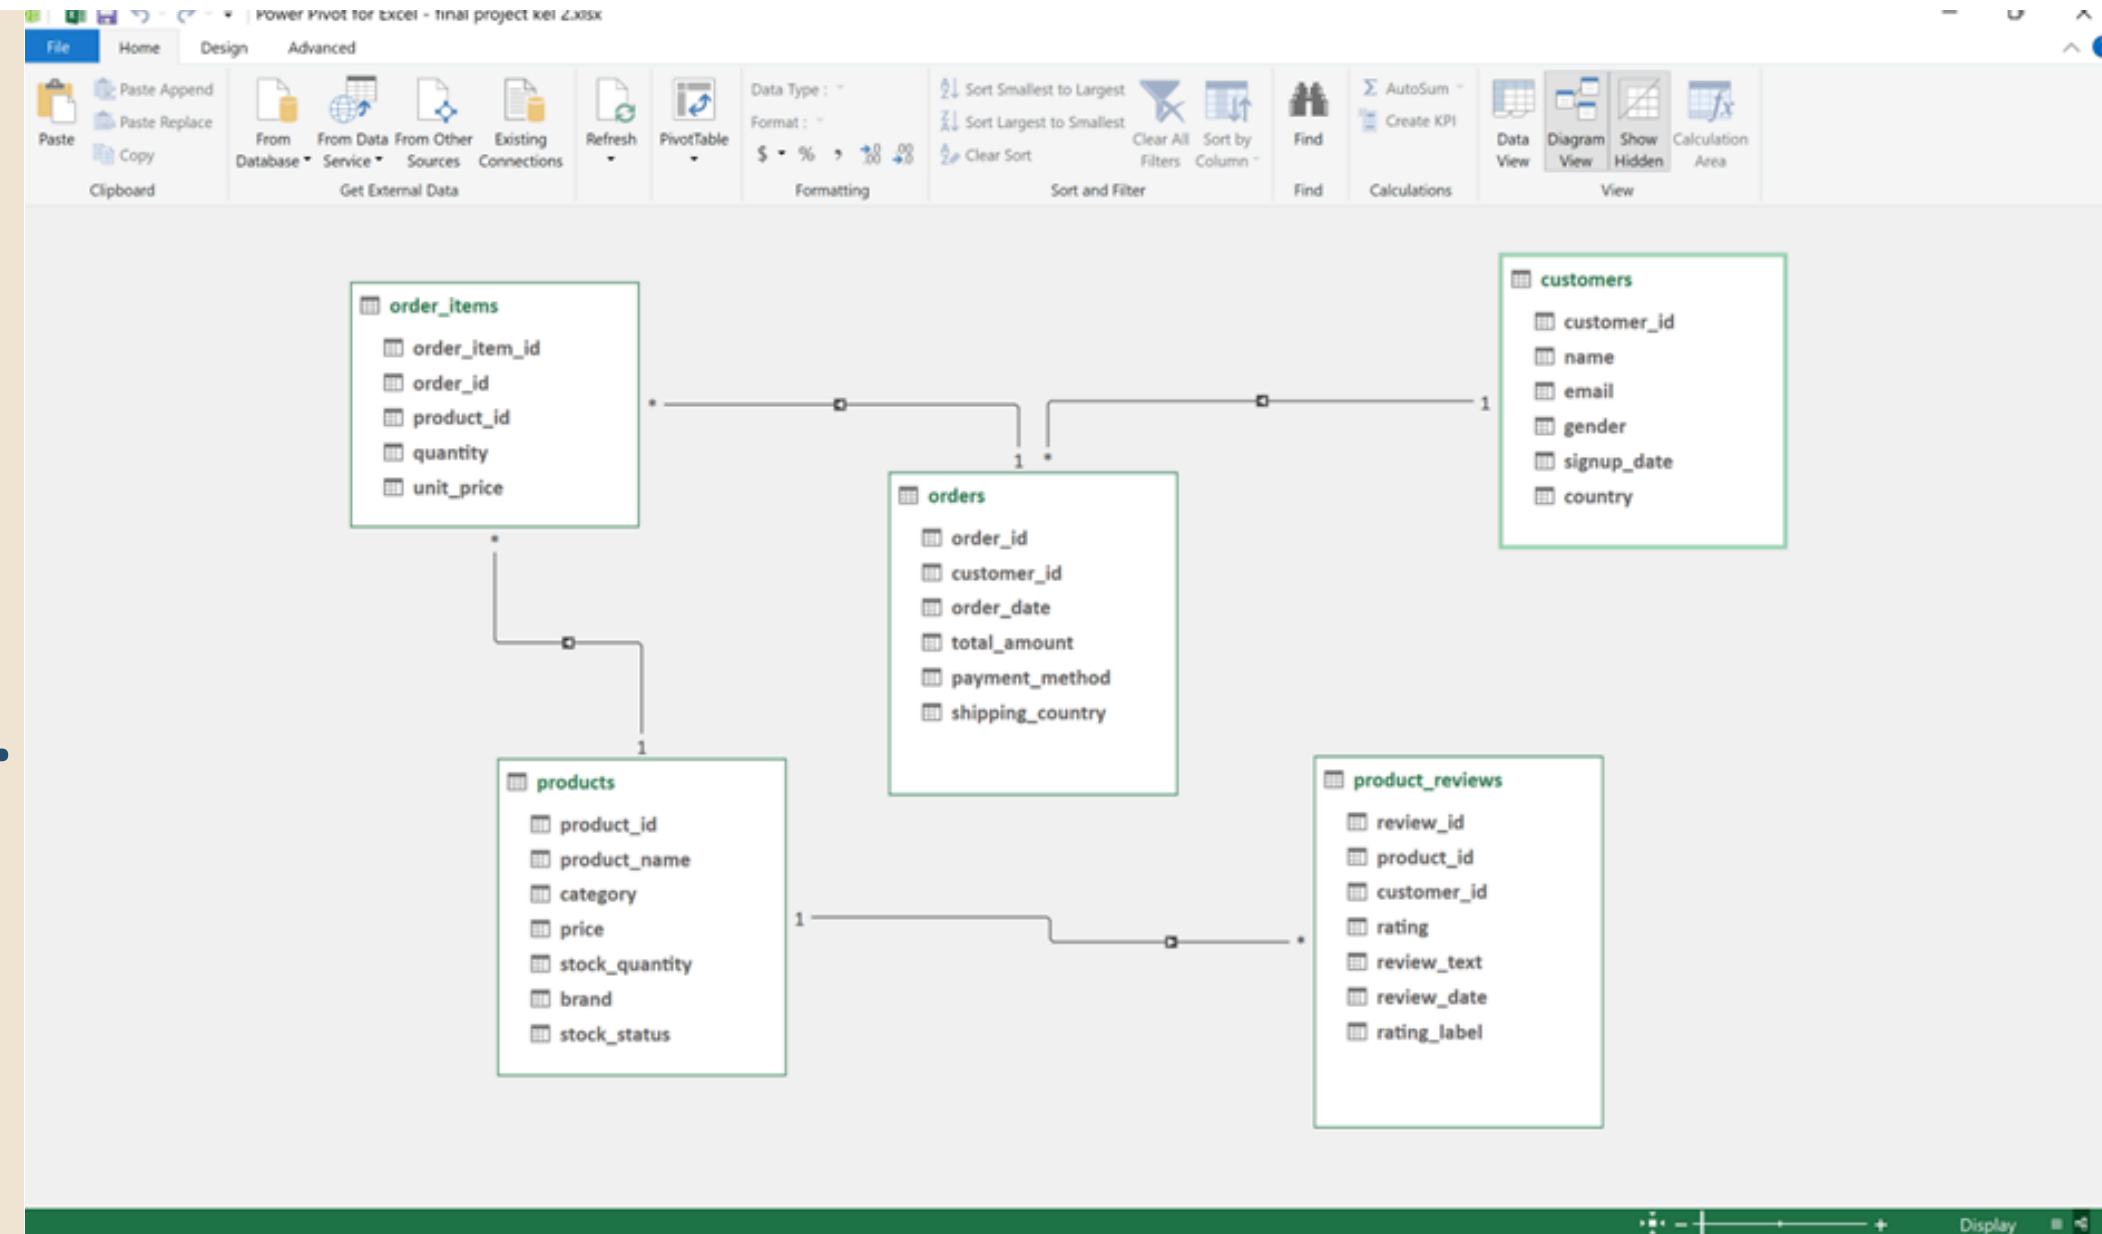

Kami juga membuat Conditional Function yang dibuat di dalam power query, dengan kondisi :

1. Rating = 5 maka excellent
2. Rating = 4 maka good
3. Rating = 3 maka netral
4. Rating = 2 maka poor
5. Rating 1 = maka very poor

[illegible]

Power Pivot and the Data Model

Seluruh table telah dimasukkan ke dalam data model dan membuat relationship berdasarkan attribute/kolom yang bisa dihubungkan.

Power Pivot and the Data Model

calculated fields / measures

Gambar ini adalah DAX CALCULATION di Power Pivot dengan detail :

- `total_revenue:=SUMX(order_items;order_items[quantity]*order_items[unit_price])`
- `total_orders:=DISTINCTCOUNT(orders[order_id])`
- `average_order_value:=DIVIDE([total_revenue];[total_orders])`

The screenshot shows the Power Pivot for Excel window. The main table displays data from the 'order_items' table with columns: order_item_id, ord..., produ..., quantity, unit_price, and Add Column. The table contains 21 rows of data. Below the table, the calculated measures are displayed:

Measure	Value
total_revenue	345818996
total_orders	5000
average_order_value	69163,7992

The bottom of the window shows the 'customers' tab selected, and the status bar indicates 'Record: 1 of 5,000'.

Power Pivot and the Data Model

Cube Function

Cube Function menampilkan total revenue dari MEASURE yang sudah dibuatkan pada DAX CALCULATION di power pivot

`=CUBEVALUE("ThisWorkbookDataModel";"[Measures].[total_revenue]")`

The screenshot shows an Excel spreadsheet with a data table and a summary section. The data table has columns for order_item_id, order_id, product_id, quantity, and unit_price. The summary section shows the results of the CUBEVALUE function.

Conditional and Number Formatting

Number Formatting

Gambar ini adalah contoh number formatting dimana kami membuat kolom baru bernama total_amount (RP) untuk mengkonversi nilai dari total_amount ke bentuk rupiah.

The screenshot displays an Excel spreadsheet with the following data table:

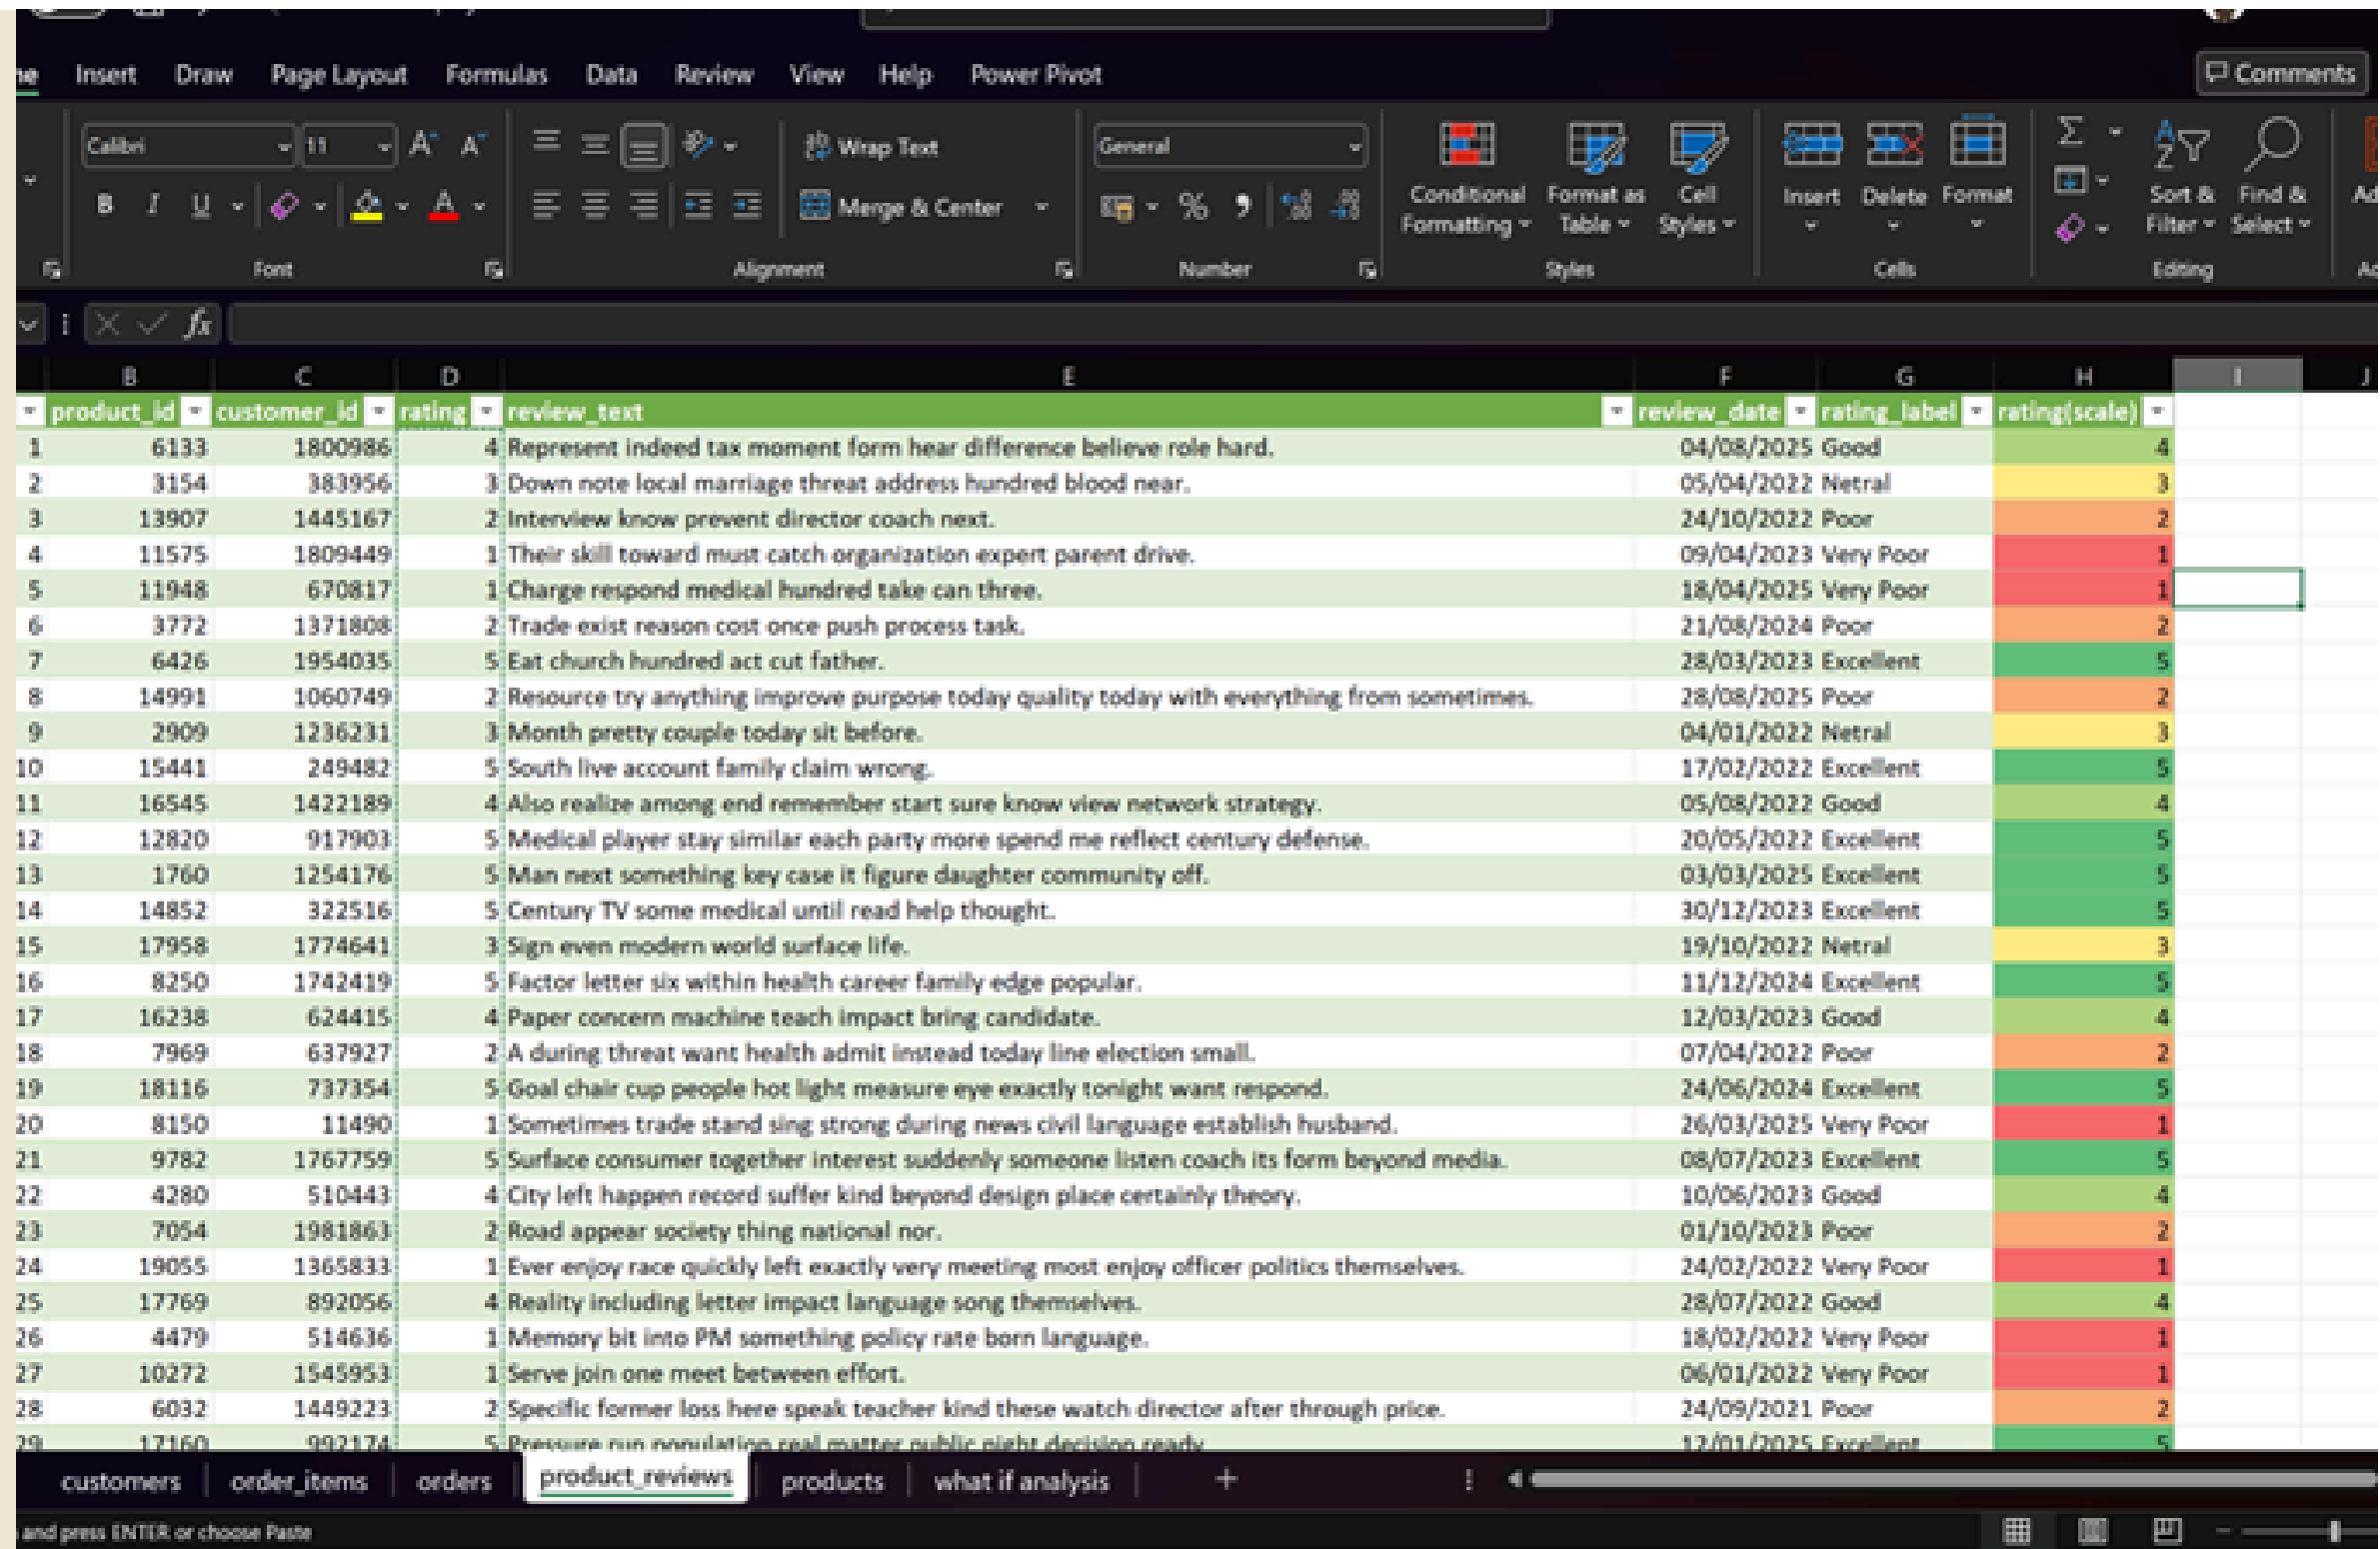

customer_id	order_date	total_amount	payment_method	shipping_country	order_year	order_month	total_amount(Rp)
331090	12/05/2025	77446	Credit Card	Pakistan	2025	5	Rp77.446
208473	31/12/2022	7578	Bank			12	Rp7.578
847096	19/09/2021	235587	Credit Card			9	Rp235.587
1919911	21/10/2024	77677	Credit Card			10	Rp77.677
1551203	31/08/2022	125789	Bank			8	Rp125.789
239997	24/08/2022	258273	Credit Card			8	Rp258.273
721824	16/11/2023	3988	Credit Card			11	Rp3.988
810120	11/12/2021	547788	Bank			12	Rp547.788
1019788	15/06/2024	84327	Bank			6	Rp84.327
1446917	25/10/2021	407605	Credit Card			10	Rp407.605
772517	25/01/2025	387532	Credit Card			1	Rp387.532
1159711	26/03/2022	238416	Bank			3	Rp238.416

1251221	05/10/2022	102314	Bank			10	Rp102.314
492078	18/09/2024	164581	Credit Card			9	Rp164.581
1283354	02/01/2023	502	Bank			1	Rp502
1257285	25/02/2025	400819	Credit Card			2	Rp400.819
176656	05/09/2022	243675	Credit Card			9	Rp243.675
1513096	26/01/2024	30173	Bank			1	Rp30.173
1424621	21/09/2024	123722	Bank			9	Rp123.722
1584836	09/04/2022	436344	Credit Card			4	Rp436.344
776366	21/07/2024	149176	Bank			7	Rp149.176
689305	27/10/2022	43511	Credit Card			10	Rp43.511
395661	26/04/2024	378649	Credit Card			4	Rp378.649
1208810	15/09/2022	447592	Credit Card			9	Rp447.592
22942	12/08/2025	110542	Credit Card			8	Rp110.542
176879	04/04/2022	77449	Credit Card			4	Rp77.449
738397	07/07/2022	39993	Bank			7	Rp39.993
1386774	02/02/2025	3488	Credit Card			2	Rp3.488
1608096	14/09/2021	156896	Bank			9	Rp156.896

The 'Format Cells' dialog box is open, showing the 'Number' category. The 'Type' field displays the custom format code: 'Rp#.##0;(Red)-Rp#.##0'. The background table shows data for various orders, with the 'total_amount(Rp)' column displaying values in Indonesian Rupiah format.

Conditional and Number Formatting

Conditional Formatting

Gambar ini kami membuat kolom baru bernama rating scale yang berisi rating dari skala 1-5 dengan conditional formatting warna hijau pekat yang menandakan rating yang paling bagus dan warna merah sebagai rating yang paling buruk untuk menunjukkan konsistensi data, excellent di tunjukkan

	B	C	D	E	F	G	H	I	J

Conditional and Number Formatting

Calculated Fields and Measure

Terdapat 2 Measure yaitu :

- oaverage rating dengan formula
“average_rating:=AVERAGE(product_reviews[rating])”
- terdapat juga anomaly orders kolom yang berisi total_amount = 0 dengan formula
“anomaly_orders:=CALCULATE(COUNTROWS(orders);orders[total_amount]=0)”

Data yang ditampilkan menjadi blank, saat data preprocessing sudah menghapus data yang memiliki value 0 di kolom total_amount sehingga measure ini membuktikan total_amount yang memiliki value 0 sudah tidak ada

The screenshot displays the Microsoft Excel interface with the Power Pivot for Excel ribbon active. The main table, 'Power Pivot for Excel - final project kiel 2.xlsx', contains columns for 'item_id', 'ord...', 'produ...', 'quantity', and 'unit_price'. Below the table, several calculated measures are listed: 'revenue: 345818996', 'orders: 4628', 'e_order_value: 74723,205704408', 'e_rating: 2,9942', and 'ily_orders: (blank)'. The 'ily_orders' measure is highlighted with a green border, indicating it is the active measure. The bottom status bar shows '1 of 5,000'.

Mastering Chart

Bar Chart

Pada Bar Chart menunjukkan total pendapatan per kategori, pada bagian pivot table total_revenue dimana total pendapatan per kategori, pada bagian pivot table total_revenue

Mastering Chart

Line/Trendline

Pada Trendline menunjukkan total order setiap tahunnya, terlihat pada tahun 2022-2024 total order menunjukkan konsistensi di sekitar 1138-1198 order, lalu turun lagi di tahun 2025

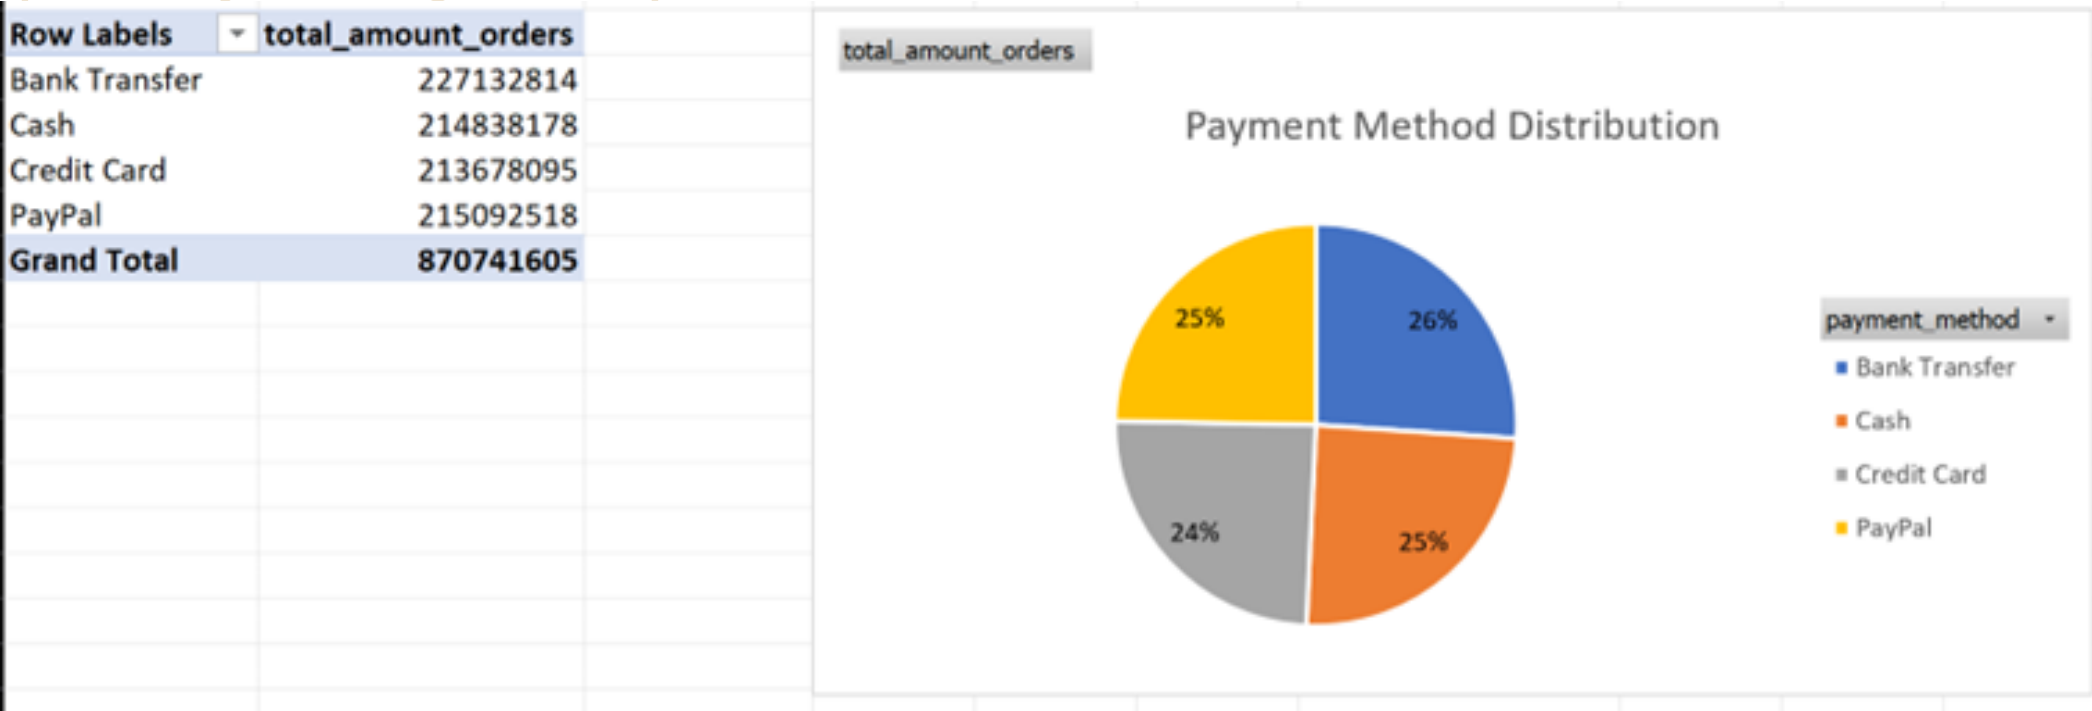

Mastering Chart

Scatter Plot

Scater plot diatas menggambarkan harga berdasarkan rating dengan bisa mengambil kesimpulan rating tertinggi yang berada pada rentang harga 10 hingga 15 juta electronics

Mastering Chart

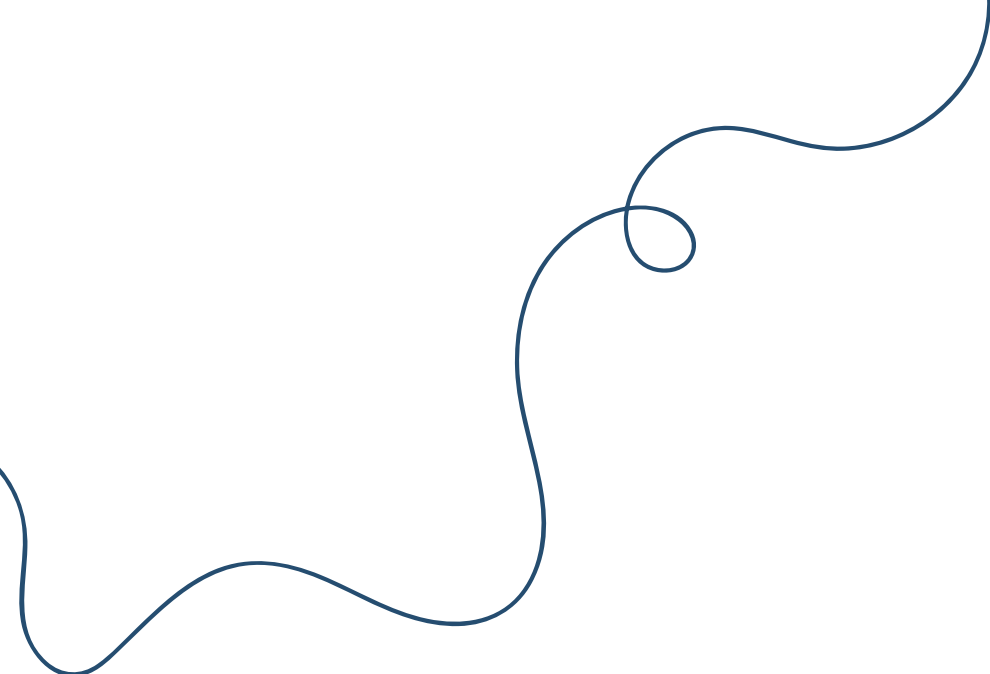

Pie Chart

Pie chart ini menggambarkan distribusi metode pembayaran yang terlihat cukup seimbang antar setiap metode tetapi bank transfer tetap mendominasi distribusi metode pembayaran diatas.
